

## EN INSTRUCTIONS FOR USE

**Koi-Vita** from **Aquatic Nature** is a highly concentrated vitamin complex for all Kois and pond fishes.

Vitamins act like a catalyst on the metabolism and are essential for growth and reproduction, as well as intensity of colors. The resistance of fish against external influences depends on a well-balanced supply of vitamins.

Even with the appropriate vitamin supply in the **Quick-Grow**, **Bright-Color** and **Excel-Color** of **Aquatic Nature**, there are certain situations in which it is important to add vitamins: stress due to transport, acclimating and conditioning of fish in the pond, or after a treatment with medication.

## USAGE

**Koi-Vita** is especially appropriate for all foods in pellet form. Due to the oil consistency of **Koi-Vita**, it adheres to the food and is not removed once in the water.

Put the necessary portion of food into a container.

Add 1 drop of **Koi-Vita** on a volume of 1 cm<sup>3</sup>.

Leave it for a few minutes in order for the Koi-Vita to penetrate into the food, then feed.

**Koi-Vita** should be used 3 times a week.
