

pH Minus

pH Minus for freshwater, reduces the pH in a safe and effective way. The Kh value will slightly reduce.

User Instructions : Prior to use, check the aquariumwater : Do not use when the ph value is under 6.3, the kh should not be below 3° Kh. 1 dosing cap (= 15 ml) reduces the pH value with approximately 0.2 pH on ± 100 Liter, depending on the hardness of the aquarium-water.

Distribute the pH Minus at the outlet of the pump, preferably in the morning. Repeat the treatment once daily, and control regularly the values of pH and KH. Shake well before use.

Safety measures : Keep out of reach of children.

In case of direct contact with skin or clothes, rinse immediately.
